SHORT BIO

I am a Junior Front-end developer passionate about creating dynamic and user-friendly websites. My substantial experience in HTML, CSS, JavaScript, TypeScript, and React has enabled me to develop responsive and visually appealing web pages. I prioritize intuitive user interfaces and strive to deliver high-quality code with optimal functionality. I have experience working both independently and collaboratively within teams, successfully completing technical tasks within specified deadlines. I am a quick learner and constantly seek opportunities to expand my skill set, which makes me a valuable asset to any team.

In addition, I have practical experience in developing Android applications using Java, Kotlin, RoomDB, REST API, and incorporating Machine Learning Models with Python and TensorFlow. I believe these skills align with the current AI trend and can be leveraged effectively.
